

Please join us at Loveland Living Planet Aquarium for a fun, learning-focused workshop designed to help your students become more proficient and have fun while doing it! This course, Stability of Populations, is designed to help second graders better understand Utah SEEd Standard 6.4.4. Over the morning, teachers will learn and work through a three-part, multi-sensory lesson plan based on 3D science. Workshop participants will be provided digital materials to help them use this lesson plan in their classrooms. Workshop participants will also have the opportunity to work through the lesson plan's activities and discuss the plan with their fellow educators. Successful completion of this event will result in participants earning three relicensure hours. Participants also will receive complimentary breakfast and admission to the Aquarium.

When: Sunday, April 14th, from 9AM-12PM

Where: Loveland Living Planet Aquarium, 12033 S Lone Peak Pkwy, Draper, UT 84020
